User can set scan schedule daily basis or weekly basis.

Update Setting :

User can set update schedule daily basis or weekly basis.

### **4) App Manager :**

Showing all user installed applications along with their size.

User can be able to see all installed application in mobile as well as user able to uninstalled unwanted application easily and save memory space and improve mobile speed.

### **5) Privacy Control :**

It will be a new feature to merge into the Android Mobile Security App.

Helpful to see what are the permissions used by particular app.

It is very usefull feature because some app access your important data like contact list, reading sms, images etc.

So you can able to see here all permissions used by app and actual meaning of that perticular permission.

Here Categorise as per used permissions wise application list and appwise used permissions list.

### **6) Space Analyser :**

Show the internal and external used space and free space.

Categories different folder as per collections of different files from images,videos,Images,Download,Documents,Apps.

List all directories/files from internal storage and external storage.

Sorting the files and directories as per the maximum size.

User can able to see which files are taking more space and path of that files.
